Name: Aayush Kumar

Registration no: 25BAI10975

Date: *27 march 2026*

Course Code: CSE0001

Course Title: Digital Literacy

program : Btech

Session : 2025-26

Branch : SCAI

Introduction

In today's time, technology is a very important part of our daily life. From studying to communication, everything depends on digital tools. Because of this, it is important for students to understand how to use these tools properly and safely. This project was given as part of the Digital Literacy course, where I worked as a Student Digital Ambassador.

The main aim of this project was to learn about digital platforms, online communication, and cyber safety. In this project, I completed five different tasks, each focusing on a different area of digital literacy. These tasks helped me learn how to create content, build an online presence, use learning platforms, communicate professionally, and stay safe from cybercrime.

Overall, this project helped me improve my understanding of the digital world and made me more confident in using technology responsibly.

Task 1: Digital Literacy Infographic

In this task, I created a digital literacy infographic using Canva. The purpose of this infographic was to explain the meaning of digital literacy and why it is important for students. I included topics like safe internet practices, useful digital tools, and maintaining a professional online presence.

I chose Canva because it is easy to use and provides many ready-made templates, icons, and design options. While creating the infographic, I tried to keep the design simple and clear so that anyone can easily understand it. I used short points, simple language, and attractive visuals to make it more engaging.

One challenge I faced was organizing all the information properly in a single page. At first, it was difficult to decide what to include and how to arrange everything neatly.
However, after trying different layouts, I was able to complete it successfully.

This task helped me understand how important visual presentation is. It also improved my creativity and taught me how to share information in a simple and effective way.

Task 2: Digital Portfolio

In this task, I created and updated my profiles on platforms like GitHub and LinkedIn. These platforms are very useful for students because they help in building a professional online identity.

GitHub is mainly used to upload and manage projects, while LinkedIn is used for professional networking and connecting with people from different fields. I added my basic details like my education, course, and a short introduction to my profile.

Before this task, I did not realize how important it is to have a digital presence. Now I understand that these platforms can help in getting internships and job opportunities in the future. They also allow us to showcase our work and skills.

In the coming years, I plan to keep updating my profiles regularly by adding new projects, skills, and achievements. I will also try to connect with professionals and learn from their experiences.

This task helped me take the first step toward building my professional career online.

Task 3: Platforms Exploration

In this task, I explored different online platforms related to coding and collaboration. First, I created an account on a coding platform and completed a beginner-level problem. This helped me understand how coding platforms work and how they can improve problem-solving skills.

The second part of this task was creating a Google Form. I created a digital literacy quiz with five questions, including both multiple-choice and short answer questions. This form can be used to check awareness among students about digital literacy.

I also linked the form to Google Sheets, which helped me understand how responses are collected and stored automatically. This was very useful because it showed how digital tools can make work easier.

This task helped me learn that there are many online platforms that can support learning, practice, and collaboration. These tools can be very helpful in academics as well as in future projects.

Overall, this task improved my confidence in using online tools for both learning and communication.

Task 4: Email Etiquette

In this task, I learned how to write professional emails and how to communicate properly in a digital environment. I wrote two emails—one for requesting an extension from a professor and another for applying for an internship.

Through this task, I understood that writing a proper email is very important. A good email should have a clear subject line, polite language, and a proper structure. Even small details like greeting, spacing, and closing make a big difference.

I also created a social media checklist with do’s and don’ts. This helped me understand how our online behavior can affect our image and reputation.

This task made me realize that communication is not only about what we say, but also how we say it. In the future, I will make sure to write emails in a clear and respectful way and use social media responsibly.

Task 5: Cybercrime Awareness

In this task, I learned about UPI fraud, which is one of the most common types of cybercrime in India. I studied how scammers trick people using fake payment requests and suspicious links.

What surprised me the most was how simple these scams are and how easily people can become victims. Many users do not understand how UPI works, and this lack of awareness makes them easy targets.

I also learned about the importance of reporting such frauds using the National Cyber Crime Portal and helpline number 1930.

After completing this task, I have become more careful while making online payments. I will always check payment requests and avoid clicking on unknown links. I will also make sure not to share any sensitive information like OTP or UPI PIN.

This task helped me understand the importance of being alert and responsible online.

Conclusion

This project was a very useful learning experience for me. It helped me understand different aspects of digital literacy, such as using online tools, creating content, communicating properly, and staying safe from cyber threats.

Each task taught me something new and improved my skills. I learned how to present information, build a professional profile, use digital platforms, and write proper emails.

Most importantly, I understood the importance of using the internet responsibly. In today's digital world, being aware and careful is very important.

Overall, this project has helped me become more confident and responsible while using technology, and these skills will be very helpful in my academic and professional journey.
